

MOHAMMADI POWER NETWORK EQUIPMENT

ABOUT US

Mohammadi Electric Network Equipment Company

Mohammadi Electric Network Equipment Company, as a leader in the production and distribution of electrical equipment, offers a diverse range of products to the market, addressing the needs of various industries, agriculture, and hospitals. One of our main products is electric transformers, which are designed and manufactured for factories, agricultural wells, and other locations requiring electricity.

At Mohammadi Electric Network Equipment Company, we believe that quality and safety should always be prioritized. For this reason, all of our products are produced under strict quality controls and based on national and international standards. Additionally, our commitment to customers drives us to offer strong after-sales services and technical consultations.

Types of Products

Aerial bundled cable

Aerial bundled cables, due to their special design, are used in overhead power transmission lines without the need for additional support. These cables are highly resistant to weather conditions and mechanical loads, providing a high level of safety.

Stranded Electrical Wire

Stranded electrical wires, due to their flexibility and versatility in different environments, are one of our most widely used products. These wires are suitable for general and household applications and are also used in construction and industrial projects.

Low-Voltage Wire

These wires are designed for low-voltage electrical distribution systems. With high manufacturing quality and compliance with standards, these products are ideal for supplying power to homes and small industries.

Medium-Voltage Wire

Our medium-voltage wires are designed for energy transmission at medium voltages. Due to their ability to withstand heavy loads and various conditions, they are widely used in power distribution and industrial infrastructure.

Aluminum Wire

Aluminum wires, due to their lightweight and high energy transmission capability, are an ideal option for large projects and long-distance power transmission. These products also have suitable resistance to corrosion and weather conditions.

Telecommunication Cable

Our telecommunication cables are designed for data and information transmission in telecommunication systems. These cables provide stable and reliable data transmission with high quality and speed.

Single-Core Cable

These cables are designed for specific and industrial uses. Their main features include simplicity and efficiency in power transmission.

Ground or Earth Wire

Ground wires are used to ensure safety in electrical systems and prevent hazards caused by electricity leakage. These products are manufactured in accordance with safety standards and play a crucial role in protecting equipment and users.

Electric Transformers

Our electric transformers meet a wide range of needs in terms of capacity and type. We produce single-phase and three-phase transformers with capacities ranging from 10 kVA to 2500 kVA. These transformers are designed for diverse applications including:

- Manufacturing plants: To supply the energy required for machinery and production lines.
- Agricultural wells: For irrigation pumps and other agricultural equipment.
- Hospitals: To supply power for medical equipment and critical systems.

Each of our transformers is designed based on the specific needs of customers and features the following:

- High resistance: The transformers are built to withstand weather conditions and heavy loads.
- Stable performance: These products comply with the latest global standards, ensuring high efficiency and productivity.
- Safety: All transformers are designed with safety principles to protect both equipment and users.

Medium and Low Voltage Network Accessories

In addition to transformers, we also provide the necessary accessories for installation on power poles and for power transmission and distribution. These accessories include:

- Clamps and connectors: For connecting cables to each other and to power poles.
- Insulators: To prevent electricity leakage and maintain system safety.
- Supports and rods: To hold cables and transformers at different heights.

Applications and Benefits of Accessories

- Easy installation: The accessories are designed for quick and simple installation on poles and other structures.
- Resistance and durability: These products are resistant to weather conditions and mechanical loads, ensuring a long lifespan.
- Increased safety: Using standard accessories reduces the risks associated with electricity leakage and accidents.

Mohammadi Electric Network Equipment Company, with its wide range of high-quality products, is recognized as a reputable supplier in the electrical and telecommunications industry. We strive to build strong relationships with our customers and are always ready to assist in selecting and meeting their electrical needs. For more information and consultation on choosing the right products, please contact us.
